On February 5, 2016, Baxter announced a recall of one lot of 0.9% sodium chloride irrigation because of the presence of particulate matter, identified as an insect, in the solution of a single unit.

Per Baxter, use of irrigation solution with foreign material contamination may lead to complications, such as inflammatory reaction, foreign body reaction, and local infection. These complications are dependent in which anatomic location the irrigation is used.

Catamaran, an OptumRx Company, notified members who may be affected by this recall. These members were provided information to help them identify if their medication is being recalled. In the future, these members may inquire about the 0.9% sodium chloride irrigation prescription(s) you dispensed.

If you have any questions, please call Baxter at 800-437-5176 (8:00 am – 5:00 pm CT, Monday through Friday) for more information about this recall.
